

MEDICAL SUMMARY REPORT

(Issued for Treatment & Transparency Purposes)

Patient Name: Muhammad Talba Aliyu

Age: 45

Hospital ID: CAH00 [REDACTED]

Attending Physician: B. A. Ma'aruf

Report Date: 31st January, 2026

Diagnosis : The patient has been diagnosed with ***Coronary Artery Disease (CAD)***

Coronary Artery Disease is a condition in which the arteries supplying blood to the heart become narrowed or blocked, reducing blood flow and increasing the risk of serious cardiac complications.

Clinical Assessment

Based on clinical evaluation, diagnostic tests, and physician review, the patient's condition requires urgent surgical intervention within the next 2–3 months to prevent further deterioration and potential life-threatening complications.

Symptoms and findings include:

- Chest pain / Angina
- Shortness of breath and other symptoms

Recommended Treatment

The attending physician has recommended:

- Coronary Artery Bypass Grafting (CABG) surgery
- Post-surgical monitoring
- Ongoing medication and follow-up care

Additional Medical Context

The patient is also suffering ongoing cancer treatment, increasing financial strain.
